Chemistry

Why study chemistry?

Chemistry is an extremely valuable 'A' level; it is welcomed by a broad spectrum of professions, from finance and law to the armed forces, the chemical and pharmaceutical industries and medicine. As well as nurturing understanding of the chemical world around us and informing opinions on topical issues, Chemistry develops a range of analytical, scientific, mathematical and communication skills. Chemistry is studied in small groups at the Oscar Romero Centre, where individual needs can be catered for, making learning more effective and personal.

The Course: AQA Chemistry.

The course is six modules — three taken in each year.

Year 12 AS

Module 1—Foundation Chemistry.
Module 2—Chemistry in Action.
Module 3 - Investigative and Practical Skills.

Year 13 A2

Module 4 –Kinetics, equilibria and organic.
Module 5— Energetics, Redox and inorganic.
Module 6 Investigative and Practical Skills.

Assessment :

AS Two written papers taken in January and June and one practical component which is assessed through an Investigative Skills Assessment (ISA).

A2 Two written papers taken in January and June and one practical component which is assessed through an Investigative Skills Assessment (ISA).
